Technical presentations
on future trends in timber construction

Practical knowledge that will help you in your day-to-day work

The timber construction industry is changing rapidly. New technologies, increasing competitive pressure, and the shortage of skilled workers are presenting challenges for many companies. In our technical presentations, industry experts, technology partners, and WEINMANN specialists will discuss the topics that matter to timber construction companies today and tomorrow:

- AI and robotics in manufacturing
- High automation in large-scale projects
- Serial renovation from a craftsman's perspective
- Multi-story construction for small and medium-sized businesses
- Other current market topics

Take home valuable insights for your business and learn which technologies and strategies will shape the timber construction industry of tomorrow.
Different technical presentations will take place on each day of the trade show. No registration is required to attend.

Innovation Hub

Innovations for more efficient processes and production

From work planning and production scheduling to AI-powered assistants: At the Innovation Hub, we showcase cutting-edge technologies across the entire production process.

At interactive stations, we'll demonstrate live how digital and analog tools can support you in production. Take this opportunity to discover new ideas and actively influence development with your feedback.

Ending the day in great company

The Timber Construction Evening with a DJ, networking, and a great atmosphere

Round out the WEINMANN gathering in a relaxed atmosphere and look forward to interesting conversations, new connections, and networking opportunities.

At the Timber Construction Evening on
Thursday, November 12, 2026, starting at 5 p.m.,
a cozy atmosphere, culinary delights, and a DJ will ensure a successful evening.

Live machine demonstrations

From carpentry machines to robotics

Experience our entire machine portfolio live on site. We'll be placing a special focus on the new **BUILDTEQ A-200** and the upgraded **BEAMTEQ B-660**. We'll also be introducing you to the new **wupWorks 5** operating software for the WALLTEQ.

NEW: BUILDTEQ A-200 ASSEMBLY TABLE

The **BUILDTEQ A-200** supports wood construction companies with a flexible, modular concept for element assembly. It can be easily integrated into existing production processes and enables space-saving flipping of elements right on the spot. This improves ergonomics, saves valuable production space, and creates more flexibility in day-to-day operations.

BEAMTEQ B-660: Optimized carpentry processes

The upgraded **BEAMTEQ B-660** helps timber construction companies make their joinery processes even more efficient. Optimized production workflows shorten cycle times, increase productivity, and at the same time contribute to consistently high component quality. This allows orders to be processed more cost-effectively and reliably.
