

Strategic. Efficient. Focused.

Starter Workshop Production Optimization
Concrete strategies for immediate implementation

Starter Workshop Production Optimization

Concrete strategies for immediate implementation

Continuous growth and changes in objectives and framework conditions are usually accompanied by the further development of defined structures. The Starter Workshop Production Optimization is a strategic roadmap for further developing your organization and your internal structures. On site, we work together to develop an action plan – naturally adapted to your company

objectives, processes, production and organization. The aim is to identify potential for increasing efficiency and performance. The conceptual study provides you with the basis for making decisions in a targeted manner, initiating the appropriate measures and aligning your company in the long term in a way that works perfectly.

POSSIBLE FOCAL AREAS OF THE WORKSHOP:

- **Products:** How can design details be simplified or cleaned up? Is it possible to design components in a modular way?
- **Production concept:** Does your company have the right machines or the right degree of automation? Which machines and systems can be used to manufacture in a more efficient way?
- **Material flow and machine positioning:** How can components and elements flow through production even more efficiently in the future?
- **Logistics in production:** Which transport methods are suitable for unprocessed parts, components and auxiliary materials?
- **Organization:** How can we ensure that information flows correctly and accurately from receipt of order to dispatch?
- **Layout planning:** Bring the layout of the machines and equipment in line with the ideal material flow.
- **Workplace design:** Suggestions for optimizing ergonomics and material provision

INCREASED PRODUCTION EFFICIENCY IN JUST 5 STEPS

1. Kick-off appointment via Microsoft Teams (video call)

- First meeting and recording of the most important information before the on-site visit
- Coordination of the specific project objectives and focus areas

2. Preparation for the visit

- Evaluation of key figures and preliminary information

3. Two-day on-site visit by a specialist advisor

- On-site visit of a SCHULER engineer to your company
- Against the background of your corporate objectives, we analyze the processes, production and organization of your company

4. Development of results and recommendations

- We develop the right concept for you with specific short-term and long-term recommendations for action
- Concept development to increase productivity and efficiency in your production

5. Final presentation via Microsoft Teams (video call)

- Presentation of the results of the analysis and specific suggestions for improvement (documentation of all results is available afterward)

SCOPE OF SERVICES

The Starter Workshop Production Optimization is executed according to the steps described. All travel and accommodation costs within Germany are included. On request, the recommended improvements can be implemented together with our support (follow-up project). If you would like a different project process or if you already have specific ideas, we will be happy to prepare an individual offer with an estimate of the costs involved (invoicing based on costs).

THE BENEFITS

- You will receive a strategic concept that is suitable for you as a roadmap for your future decisions.
- Your decisions are based on transparent insights and facts.
- We will provide you with direct and specific optimization suggestions for immediate implementation.
- We will also make suggestions for the long-term development of your company.
