

**My tablet knows
which ingredients
I need for cooking.
It also knows how
much material is
in stock.**

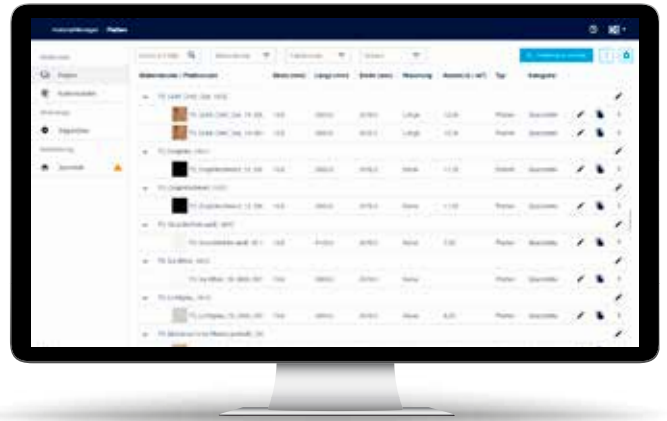

materialManager

All material data and stocks managed clearly in just one digital application.

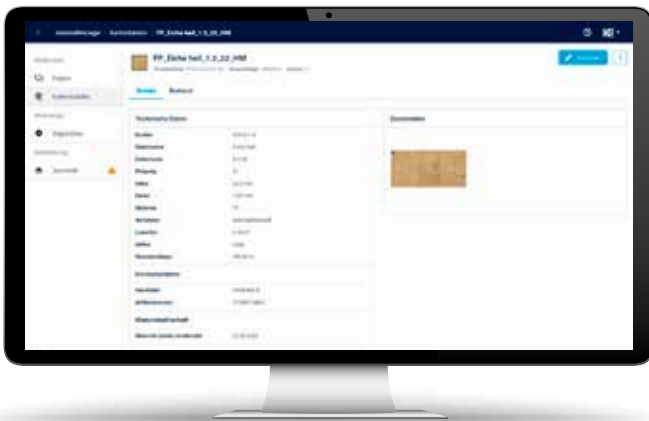

The variety of materials is constantly increasing and with it the spectrum of material stocks and variants in your company. But how do you get the best overview of your materials and material data? With materialManager as the central material management you can register and organize all information about your edgebanding and panel materials in your company in a comprehensive and detailed overview.

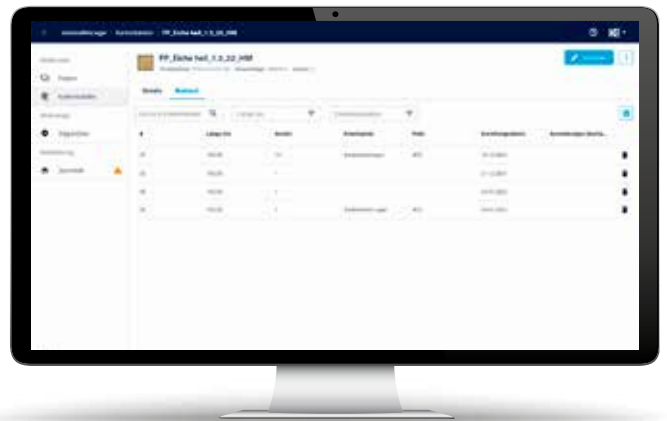

Register all your edgebands...

...and panel materials.

In the detailed view you can see all information at a glance.

Overview of rest length and storage space of each edgeband.

Your benefits at a glance:

- ✓ **Central material management in the company:** Overview of all materials and stocks of your edgebands and panel types, including allocations
- ✓ **Integrated use of material data:** Use of the material data in other apps and digital assistants from HOMAG (e.g., productionManager, intelliDivide, etc.)
- ✓ **Use of material data** in other digital HOMAG applications (e.g. intelliDivide)
- ✓ **For managing up to 10,000** different types of edges and panels
- ✓ **Automatic edge length feedback** in connection with the Edge Data Package (Edgeband Management Set + Edge Data Plugin)

Special features:

- The material data is automatically available in other apps and digital assistants from HOMAG and can be used directly.
- Panel library for intelliDivide (optimization software for cutting and dividing panels in a nesting process)
- The catalog data of well-known manufacturers is available digitally in materialManager. There is no need to create data manually; all relevant information is provided directly. This helps to keep time and management costs to a very low level. The number of potential transfer errors that can result from manual input is reduced.
- Overview of panel material currently available thanks to the allocation options in materialManager
